Write a python program to implement binary search on the given list of string values using iterative method

For example:

Test	Input	Result
binarySearchAppr(arr, 0, len(arr)-1, x)	5 one two three four five two	Element is present at index 4
binarySearchAppr(arr, 0, len(arr)-1, x)	6 one three five seven nine eleven thirteen	Element is not present in array

```
def binarySearchAppr(arr,start,end,x):
